CLIENT CHECKLIST

What to prepare for your website

Half of a website's timeline and budget depends not on the developer but on what the client has ready at the start. Gather this in advance — drafts are enough — and the project runs without "waiting for materials" pauses.

18 points sandwor.ru Edition: October 2026

The task

- [ ] 1 **The visitor's main action**
  Call, send a request, book, buy. One main action — everything else is secondary.
- [ ] 2 **Who your client is and what they ask**
  Write down 5–10 questions people ask before buying. That list is a ready site structure and FAQ.
- [ ] 3 **3–5 example websites**
  Competitors and sites you simply like: what works for you, what annoys you. It saves rounds of design edits.
- [ ] 4 **Where visitors will come from**
  Ads, search, social networks, maps, referrals. This shapes the page structure and analytics.

Content

- [ ] 5 **Texts about services or products**
  What is included, for whom, a price at least "from", timelines. A draft in your own words is enough — we will edit it.
- [ ] 6 **Photos**
  Your own real photos sell better than stock: the team, the work, the place, the product. Horizontal and vertical, in daylight.

- [ ] 7 **Logo and brand style**
  The logo in vector (SVG, AI or PDF), brand colours and fonts — if you have them.

- [ ] 8 **Proof**
  Work samples, case studies, client reviews (with permission), certificates, numbers you can back up.

- [ ] 9 **Contacts and company details**
  Phone, messengers, email, address and opening hours, details for the footer and documents.

Access — in your name, not the contractor's

- [ ] 10 **Domain**
  Registered to you or your company, with access to DNS settings.

- [ ] 11 **Hosting or builder account**
  Tilda or hosting on your account, with access granted to the contractor. Otherwise the site can "leave" with them.

- [ ] 12 **Email on your domain**
  For example, hello@your-site.com — for requests and client mail.

- [ ] 13 **Analytics and search**
  Yandex Metrica, Webmaster and Google Search Console on your account.

- [ ] 14 **Where requests will go**
  A CRM, email or a messenger. A CRM is best: requests are not lost and you see where they came from.

Organisation

- [ ] 15 **Who approves**
  One person on the client side who makes decisions and replies within a day.

- [ ] 16 **Budget and deadline**
  A budget range and the date you need the site by — with a buffer for approvals.

- [ ] 17 **Who will update the site**
  You, a colleague or a contractor. This decides what the site should be built on.

- [ ] 18 **Documents**
  A personal data policy, a separate consent for each form and a Roskomnadzor notification; for online sales — terms of sale and returns.

You do not need everything to be perfect: drafts and voice notes work too. What matters is having them at the start, not at the end of the project.
